UPSKILLING YOUR TEAMS

WHO WE ARE

Evolving needs of the market shape the way organizations and individuals invest in their talent in times of dynamic growth and change.

Our programs are focused on increasing the pool of skilled workers by closing the skills and knowledge gap. We help upskill corporate teams and individuals not only with the knowledge needed for a particular role, but also help them advance and transition from their current role and make the most out of their first 90 days on the new job. Through partnership with our clients and close monitoring and mentorship of our participants, we have seen great success by creating the most opportunities for business as well as social impact.

Developed by top experts in their corresponding fields, this digital learning program focuses on upskilling, building new skills and enhancing perspectives. Learn creates next-level learning experiences while tackling the challenges that organizations often face when it comes to training. We engage learners by infusing every course we create with innovative, memorable and immersive content and modalities.

DESCRIPTION OF PROGRAM:

Our program objective is to upskill teams and individuals which will enhance their skill set and enable them to meet the changing processes and technologies of the organization.

Simultaneously, we support employers who want to increase the diversity of their teams by creating opportunities for traditionally underrepresented groups.

Our team evaluates learning needs to provide solutions by partnering with organizations to create out of the box learning experiences.

OUTCOMES:

We guide the participants through training and partner with them to ensure success within the program and beyond. Our program is custom designed and developed to address the different ways our students learn and includes mentorship throughout.

In our practice, we support companies looking to upskill their employees in the areas of:

- Full Stack Engineering (Java, JavaScript, React, Unix, Bootstrap, & more)
- Agile Transformation
- Digital Literacy
- Data Engineering
- Sales Enablement & Marketing
- Customer Service
- Human Resources
